

● particles (bars: σ_D , $\sigma_{1/r}$) ○ cut by drift/ α gates (excl.) — measured k_B (per-bead median) - - accepted k_B

Red band = $\pm 1\sigma$ statistical SE on the median slope (= the $\pm$ on k_B). n = particles passing the drift and $\alpha \in [0.7, 1.3]$ gates (filled); gated-out beads shown open.
