

Week-1 per-bead k_B by run ($k_{B,i} = 6\pi\eta(T) r_i D_i / T$; free spheres $r \leq r^*$)

$T = 25 \text{ }^\circ\text{C}$, $\eta = 0.890 \text{ cP}$. Bars are the STATISTICAL SE only; common-mode radius ($\pm 1 \text{ px}$) and T systematics shift all points together (see plot2).
